

IOTA

Connecting our world to{day,morrow}

Crossing the Chasm

Important Puzzle Pieces

Technology

Governance

Ecosystem

Technology

The Tangle

Feeless, Scalable, Quantum-immune

The Tangle is a permissionless peer-to-peer network based on the open source distributed ledger protocol IOTA

The Tangle

Feeless, Scalable, Quantum-immune

Machine-to-Machine Payments

Today there is no protocol for machines to pay each other. With distributed ledgers, every machine will be able to have a wallet and they can freely transact with each other.

The Tangle

Feeless, Scalable, Quantum-immune

Data Immutability

Feeding data into a distributed ledgers makes it immutable and tamper-proof. Thanks to this data integrity, it is easy to share data with external parties in a verifiable manner.

The Tangle

Feeless, Scalable, Quantum-immune

Permissionless Ecosystems are the Future

Everyone can participate in this Ecosystem from well established companies like Bosch, DNB, Airbus to Startups or simply developers.

A Healthy Tangle

What are Distributed Ledgers?

Networks

Centralized

Decentralized
With Intermediaries

Distributed
No Intermediaries

Blockchain vs. Tangle

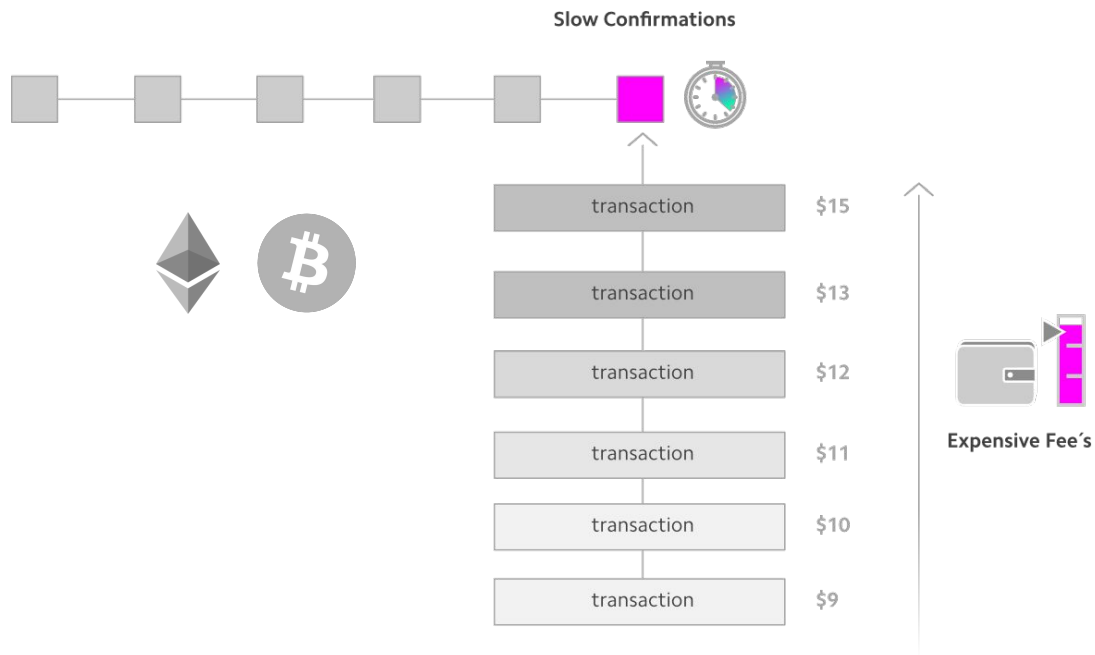

Blockchain

Tangle
(DAG / Directed Acyclic Graph)

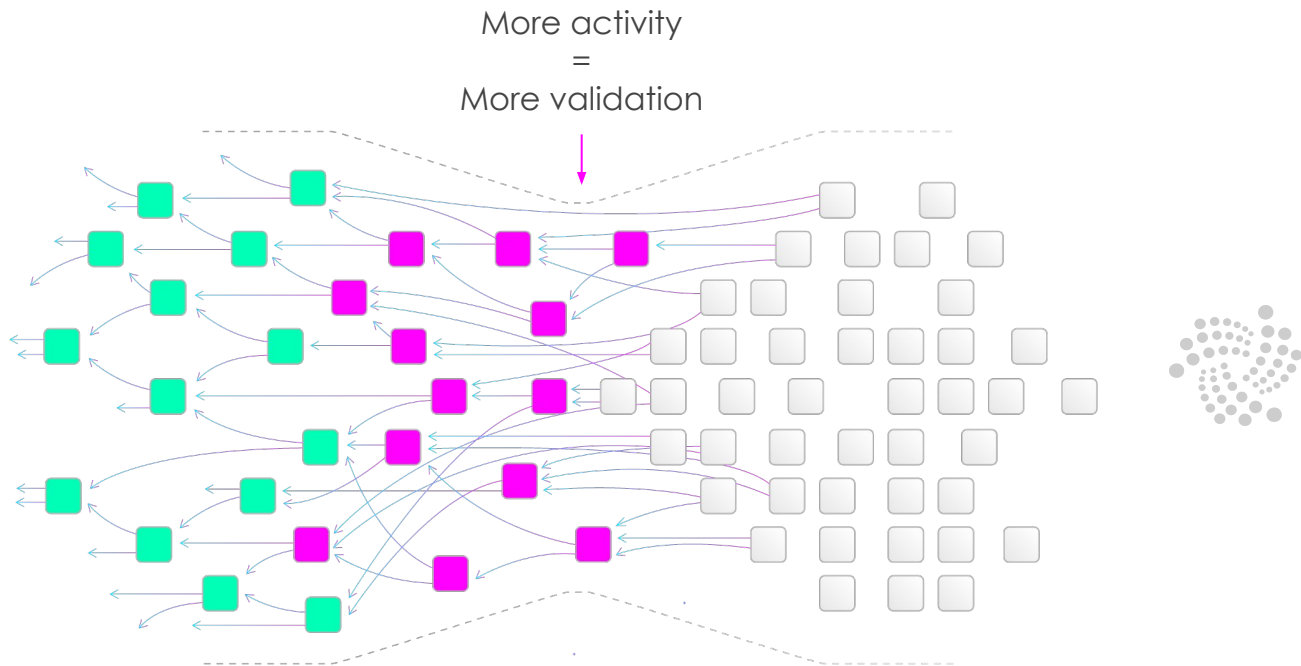

The Blockchain Bottleneck

The Blockchain Bottleneck

Tangle scales!

Consensus in IOTA

Each transaction validates 2 previous unconfirmed transactions

- Chosen by Markov Chain Monte Carlo Random Walk algorithm

Signed with private key

Small amount of Proof of Work

- Similar to Hashcash, not Bitcoin
- Spam and Sybil-resistance

Blockchain vs. Tangle

No Transaction Fees

Scalability

Offline Transactions (Partitioning)

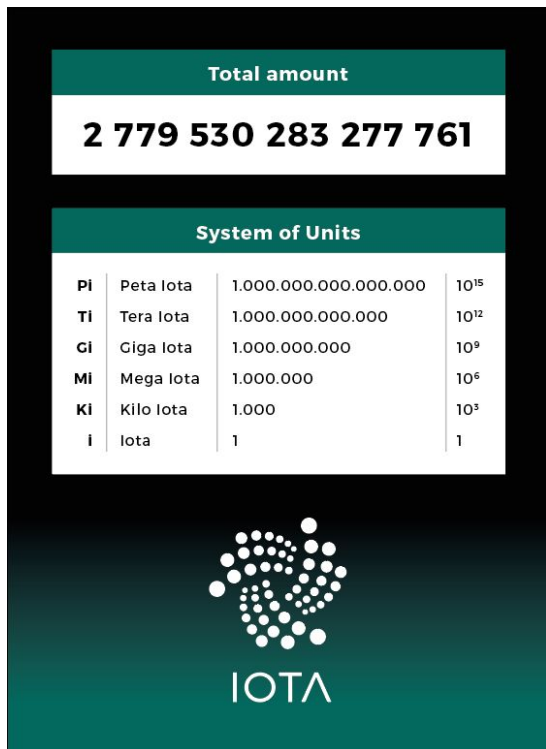

Other Benefits:

- No Miners
- Quantum immune

Disadvantages:

- Need a large enough network to be self-sustainable

Bitcoin vs. IOTA

Other Comparison:

BTC has:

2,100,000,000,000,000 Satoshi

The IOTA Tangle today has

2,779,530,283,277,761 IOTA

So almost 3 Quadrillion IOTAs and only a difference of roughly 680 trillion units

A word of caution:

Exchanges work with MIOTAs don't let people scam you!

Governance

The IOTA Foundation

- Non-profit Foundation based and regulated in Berlin, Germany
- Growth from 6 to 90+ full time employees distributed across 17 countries
- \$140m+ in funding
- Focused on Technical and Regulatory Challenges of Crypto-Currencies & DLT

(Some) Latest IOTA Foundation Member(s)

Martyn James

Software Engineer.

He truly is the definition of a full stack developer, who has spanned the gamut developing on everything from embedded controllers, back-end services, through to web, mobile, and desktop front-ends.

Martyn is a polyglot coder, adept in C, C++, C#, JavaScript, and TypeScript among others. He has been an architect and team lead on multiple projects in a diverse range of industries: Utilities (gas/electricity), Financial trading systems for multiple FTSE 100 banks, Document management, clustering and search, Accounting, Home automation with embedded controllers, Signal analysis, data capture and processing

Felix Krupar

Regulatory Affairs Specialist

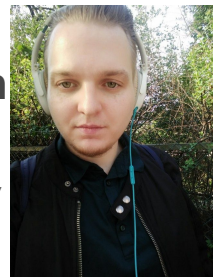

Felix will bring his expertise in regulatory and IT law to the foundation. His background in academia and practice is a great fit for his role at the intersection of legal research and policy

Rajiv Shah

Software Engineer.

In this role, he will focus on the Trinity wallet.

Phillip Blum

Developer Advocate of the Ecosystem team his experience as a software developer and technical consultant is a tremendous contribution to IOTA foundation. The intersection between technical development and adoption is key to bring IOTA to the masses as a standard

Marcos Andrade

Illustrator.

In this role, Marcos will focus on developing graphics and digital illustrations for our Multimedia content.

The IOTA Research Council

1 | IOTA
RESEARCH
COUNCIL

- The IOTA Research Council will work closely with our research department
- Strategic technological direction
- Provide academic oversight to IOTA research
- Assess and grant funding to academic partners
- Oversee collaboration with academia and other research organizations
- Consists of distinguished academics that are at the forefront of their area of expertise
- Oversee the quality to ensure high academic standards.

The IOTA Research Council Members

Gur Huberman is the Robert G. Kirby Professor of Behavioral Finance at **Columbia Business School** where he has taught since 1989. Prior to that, he taught at Tel Aviv University and at the University of Chicago. Between 1993 and 1995 he was Vice President at JP Morgan Investment Management responsible for research on quantitative equity trading. In that capacity, he also helped develop tax aware strategies for the private bank. He earned his Ph.D. (with distinction) in operations research from Yale in 1980 and his B.Sc. (cum laude) in mathematics from Tel Aviv University in 1975.

Serguei Popov
IOTA Foundation Board of Directors

is a research mathematician working in the field of Probability Theory and Stochastic Processes. He graduated from and attained his Ph.D. at the Moscow State University under the supervision of Professor Mikhail Menshikov, with whom he still happily collaborates. Around 20 years ago he moved to Brazil to do a postdoc, and then progressed to professorship first in the University of Sao Paulo, and then in the University of Campinas.

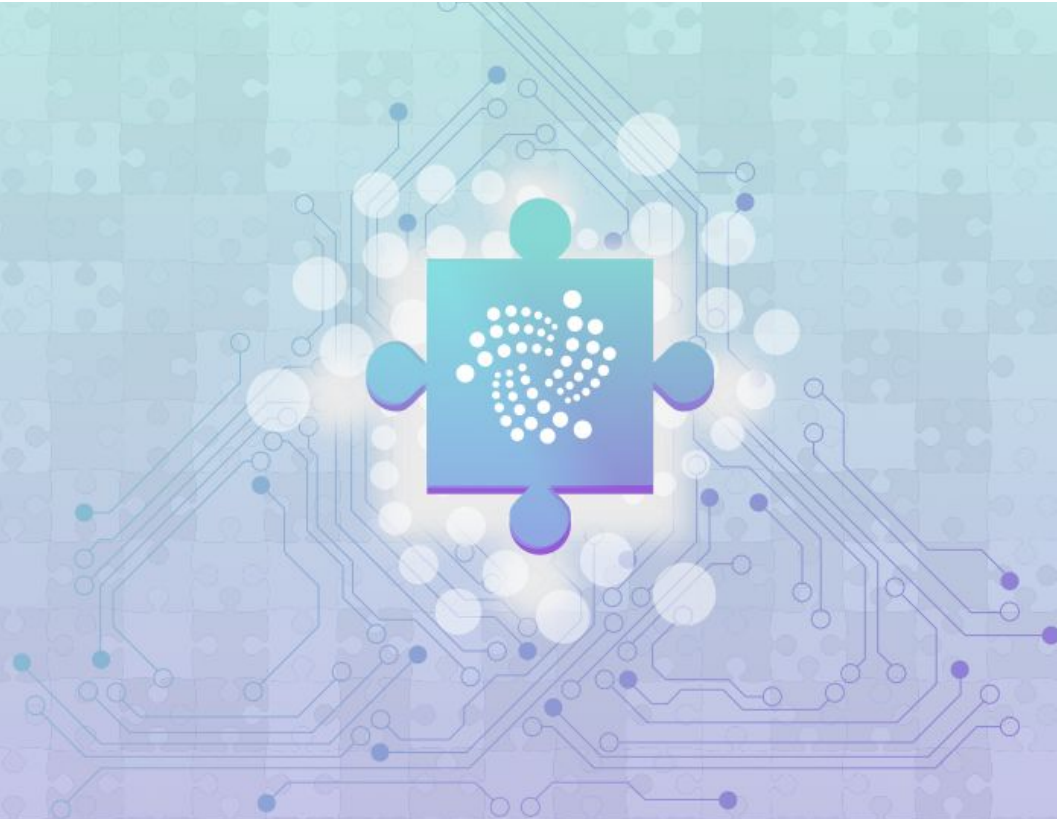

Dr. Moody Alam obtained a PhD in computer science (distributed artificial intelligence) at the University of Southampton in 2013. He spent a year at Microsoft Research, Cambridge investigating the AI aspect of smart energy systems. Spent two years in the AIC Research Group at the University of Southampton applying AI to develop smart energy systems. Then he moved to Machine Learning Research Group at University of Oxford to continue my research on smart energy systems. 2016, joined Energy Systems Catapult (an elite tech and innovation centre set up by the Govt. of UK's innovation agency - InnovateUK) as the Lead Data Scientist.

Bill Buchanan is a Professor in the School of Computing at Edinburgh Napier University, a Fellow of the BCS, and a Principal Fellow of the HEA. He was appointed an Officer of the Order of the British Empire (OBE) in the 2017 Birthday Honours for services to cybersecurity. In 2018, in partnership with Blockpass IDN, he set up the world's first blockchain identity research laboratory. he also currently leads the Centre for Distributed Computing and Security, and The Cyber Academy.

Production Readiness & Standardization

Production Readiness & Standardization

Research

Exploring the unknown

Going beyond IOTA and developing solutions for the Machine Economy requires the brightest minds to work together and research new solutions.

Development

Cutting edge technology

Development of production-ready software will make it possible for the Foundation's members to easily adopt and integrate the developed solutions.

Education & Promotion

Show your Competence

Educating members and non-members through seminars, educational materials and even larger events will ensure the Foundation's success in achieving its goals.

Standardization

Of Core Protocols

Interoperability requires standardization. A major effort of the IOTA Foundation will be to standardize the core protocols that we're developing.

DLT like any other technology is a tool and it fits the purpose and
never underestimate what a hacker can do with technology!

Ecosystem Funds Granted

Akita M2M economy showcase (USD \$367,560)

This M2M ecosystem showcase shall provide a functioning prototype that can be demonstrated by Akita and replicated for a future IOTA Lab or other lab, any corporation or even at home.

The complete process will be documented from scratch to the final showcase. The code will be made public in an open source GitHub repository and all the necessary components will be listed in a respective blueprint cookbook (Hardware, Software, Programming Skills, external resources).

Latest Collaboration(s)

Under this collaboration, the two companies will work together to increase the number of successful startups utilizing the next generation of Distributed Ledger Technology.

Nova will bring its expertise in partnering with aspiring entrepreneurs to co-found tech startups, which helps to eliminate many of the risks involved in starting a business. In addition to providing guidance across all areas of business, from market research to product development.

Andrew Dean, Head of Partnerships at Nova:” We want to make sure that IOTA entrepreneurs have the best possible chance of success. Some of the most exciting technological developments of our time are fueled by IOTA technology, and we’re looking forward to playing a part in bringing some of those ideas to market.”

Latest Collaboration(s)

The IOTA Foundation will be supporting a number of challenges at the hackathon by providing technical support to teams before, during and after the event. We've chosen these challenges due to their compatibility of the IOTA protocol to solve them

The IOTA Foundation has joined the Odyssey Hackathon, in Groningen NL from April 12–14, as an Ecosystem partner.

The Odyssey Hackathon connects selected top teams (new teams, pre-startups, startups, and SMEs) to their potential launching customers from corporate, governmental, and non-profit sectors (among which: the Dutch Ministry of the Interior and Kingdom Relations, the Dutch Land Registry and the Chamber of Commerce, Vattenfall, KLM, Nutreco, and many others).

Latest Collaboration(s)

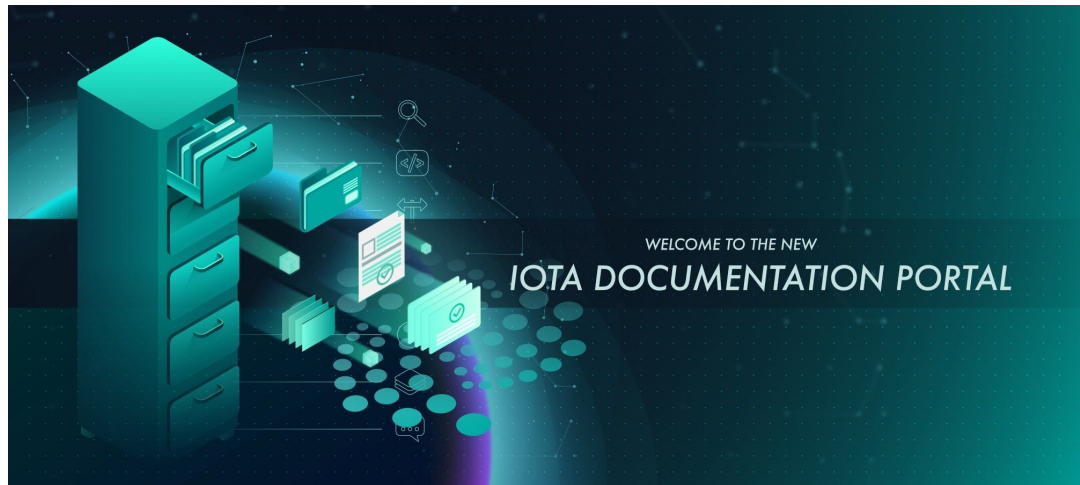

At the heart of the contest is the opportunity for developers from around the globe to solve inter-city challenges submitted by a variety of corporate entities. Hosted by [Hackster.io](https://hackster.io), an Avnet community and the world's largest hardware developer network, the virtual contest kicks off today with both corporate and supporting sponsors.

Global Developers are Invited to Create Solutions Using IOTA Tangle to Drive Smart City Innovation Worldwide

Tutorial - Private testnet with Compass

By releasing Compass, the IOTA Foundation aims to further its research into finding a viable replacement for the Coordinator.

Compass is an open-source Coordinator that can be used to protect an IOTA network against attacks. Any transaction that's referenced by a Compass milestone is considered confirmed by any IRI nodes in the network.

Compass sends honest, zero-value milestones to IRI nodes at regular intervals. Milestones can't modify balances or censor transactions because all transactions, including milestones, are validated by each IRI node in the network.

You can use Compass to create your own IOTA network for the following use cases:

- Security testing and research: Use Compass to create a controlled environment to test assumptions and produce attacks.
- Development of proof of concepts: Use Compass to develop proof-of-concept applications without sharing your ideas on a permissionless network.

Applying IOTA in Global Trade and Supply Chains

Trade facilitation, track & trace, provenance...

Opportunities to apply Distributed Ledger Technologies (DLT) to international trade and build true innovation

We have identified Minimum Viable Ecosystems of actors, and engaged in piloting activities, starting with small Proof of Concepts, all part of a bigger effort aiming to revolutionize the trade community and bring trade processes into the 21st Century. As result of these activities, we have learned where and how IOTA can be integrated with existing systems to add an interoperable trust layer for data exchange. To share some examples and guidelines for IT developers to get started, and for trade practitioners and policy makers to be inspired.

Demo: <https://tradedemo.iota.org>

The IOTA Foundation has supported partners to use IOTA technologies and created general guidelines and blueprints that will help other interested parties to replicate similar and more advanced solutions by using IOTA open source code.

Untangled - The IOTA Podcast

The podcast will be released every other week and explore the many different use cases of the Tangle in the real world in a tangible way for real people. Through interviews with community members, developers, experts, business executives and IF members the podcast will offer a number of different perspectives about topics which will differ between episodes. It will be published over a wide array of channels and will also provide links for background knowledge as well as extended knowledge of IOTA and the included use cases.

ICT - IOTA Controlled agentT

is an experimental IOTA node for the Internet-of-Things (IoT)

IoT will be full of tiny devices directly connected to each other in a dynamic mesh network

Some of these devices will move around, or suddenly turn off or on

a constantly changing environment requires a data integrity protocol with enough redundancy to deliver messages and make data accessible, despite the unpredictable nature of the network (fog computing)

IOTA Foundation is aiming to build its own IoT microcosm, with Ict as a fundamental building block.

ICT - IOTA Controlled agentT

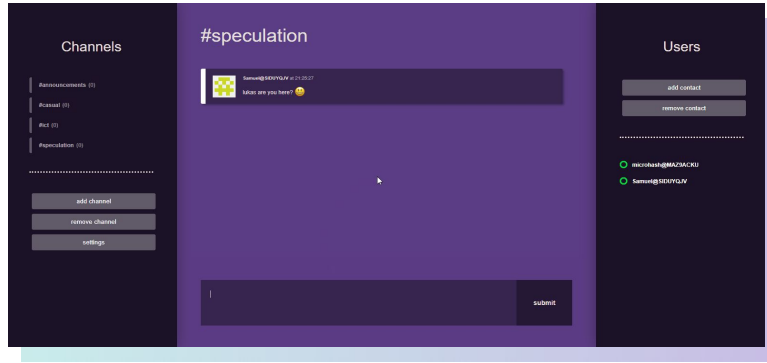

Gossip Protocol—to receive and forward IOTA transactions, plus validation of signatures etc., similar to what IRI is currently doing.

IOTA eXtension Interface (IXI)—a simplistic interface as a modular approach, to make the Ict core client extensible with various plugins and applications—the “IXI modules”.

Swarm Logic—to achieve shared goals in a swarm, where individual Icts adjust their level of redundancy, to filter out transactions not relevant for that goal.

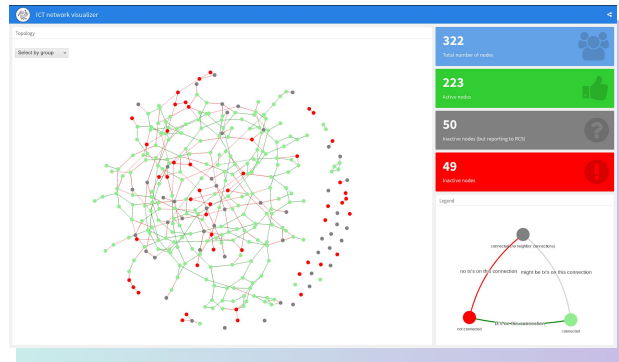

Economic Clustering—will be the only consensus mechanism integrated into the Ict core client. Other consensus mechanisms must be implemented as IXI modules running on top.

ICT - IOTA Controlled agentT - IXI Modules

IOTA eXtension Interface

Chat.ixi - Cryptographically secure chat over the Tangle
